Cancer Microenvironment and Therapeutic Implications ...

In the post-genomic era, cancer is a genetic disease. However, cancer genotype does not always equal cancer phenotype. Cancers with the same genetic abnormalities don't always behave the same. Understanding and eradicating cancers will require an appreciation for cancer's ecology.

Cancer Microenvironment and Therapeutic Implications

Cancer is frequently associated with pre-existing inflammation and fibrosis. Between 60% and 90% of hepatocellular carcinoma occurs in patients with hepatic macronodular cirrhosis (De Vita et al, 1993, Podolsky and Isselbacher 1994).

Cancer Microenvironment and Therapeutic Implications

For cancer to initiate, the immune system must look the other way, nutrients and oxygen must be served at the right time, temperature and concentration, and a hospitable bed of stroma and extracellular matrices must support burgeoning growth and spread.

The Microenvironment of Lung Cancer and Therapeutic ...

The tumor microenvironment (TME) represents a milieu that enables tumor cells to acquire the hallmarks of cancer. The TME is heterogeneous in composition and consists of cellular components.

Tumor Microenvironment: The Role of the Tumor Stroma in Cancer Hanchen Li, Xueli Fan, and JeanMarie Houghton* Division of Gastroenterology, Department of Medicine and Cancer Biology, University of Massachusetts Medical School, Worcester, Massachusetts 01605 Abstract

The tumor microenvironment composed of non-cancer cells and the stroma has become recognized as a major factor influencing the growth of

Targeting microenvironment in cancer therapeutics

As we described above, since immune evasion by cancer cells is important for the progression of tumors [60, 61], when considering cancer therapeutics, it is important to think about the strategy of re-activating the immune system to recognize and kill tumor cells.
