Roles for Growth Factors in Cancer Progression

Importantly, cancer-associated activating mutations that impinge on these pathways often relieve, in part, the reliance of tumors on growth factors. On the other hand, growth factors are frequently involved in evolution of resistance to therapeutic regimens, which extends the roles for polypeptide factors to very late phases of tumor progression and offers opportunities for cancer therapy.

Growth factors and cancer.

Growth factors and cancer. Goustin AS, Leof EB, Shipley GD, Moses HL. Growth factors, defined as polypeptides that stimulate cell proliferation, are major growth-regulatory molecules for cells in culture and probably also for cells in vivo.

Control of Growth Factors and Prevention of Cancer ...

peptide growth factors and steroid-like molecules in the prevention of cancer. Each of the participants in the Task Force represents a different scientific discipline, and the monograph is intended to be a synthesis of their different approaches to the common problem of cancer prevention.
