OVERVIEW PALEOGENE FOSSILS AND THE RADIATION OF MODERN BIRDS

The fossil birds of the Paleogene (23.8–65.5 mya) are clearly a ributable to the Neornithes (modern birds), and the earliest well-established records of most traditional orders and families of modern birds occur then. But the fossils tend to be primitive and more di cult to seat phylogenetically within the Neornithes (Dyke and van Tuinen 2004). Not a few early Paleogene fossils have been

The Paleogene Period - fossils-facts-and-finds.com

The Green River Formation is a famous fossil rich area created by these lakes. Many kinds of fossil fish are found in this rock formation today. Mammals developed in the oceans, too. Primitive whales, one of the largest mammals, began to develop at this time. Insects The insect population increased in the Paleogene Period. Bees and other insects that lived on the pollen and nectar of the flowering plants increased in numbers and variety.
