## 7 | DIFFERENCE EQUATIONS

7 | DIFFERENCE EQUATIONS Many problems in Probability give rise to difference equations. Difference equations relate to differential equations as discrete mathematics relates to continuous mathematics. Anyone who has made a study of differential equations will know that even supposedly elementary examples can be hard to solve.

dependent variable and is an  $n$ -vector, i.e.  $X \in \mathbb{R}^n, n \geq 1$ . In dynamical system theory,  $X \in \mathbb{R}^n$  is called the state of the system and  $\mathbb{R}^n$  its state space,  $n$  is called the dimension of the system. The difference between the largest and the smallest time index of the dependent variable explicitly involved is called the order of the difference equation.
