This paper explores the rural labor market impact of migration in China using cross-sectional data on rural households for the year 2007. A switching probit model is used to estimate the impact of belonging to a migrant-sending household on the individual occupational choice categorized in four binary decisions: farm work, wage work, self-employment, and housework. The paper then goes on to

Rural Labor Force Emigration on the Impact and Effect of ...

The large scale of rural labor force migration plays a tremendous role of macro-economic effectiveness on driving the agricultural and rural development, breaking the dual-economic structure long lasting in urban and rural China.

Dual Labor Markets | The MIT Press

Dual Labor Markets considers the macroeconomic implications of the dual market. The book uses theoretical models derived from the author's research over the past six years to analyze such policy issues as the level and persistence of unemployment, the level of real wages, the accumulation of human capital, and the political viability of labor market reform in the United States and Europe.
