Surgical Management of Inflammatory Eye Disease: inflammatory activity by local therapy. The second section includes a wide variety of topics concerning the surgical treatment of uveitic complications, including general treatment strategies for uveitis. Diagnosis is discussed in relation to clinical decision making. Surgical procedures are comprehensively described.

Surgical Management of Inflammatory Eye Disease: Inflammatory activity can often be managed by drug therapy. However, inadequate medical therapy may permit the development of various complications in the eye that cannot be sufficiently treated pharmacologically. Whereas drug management demands an interdisciplinary approach with well-trained specialists, surgical treatment of ocular complications due to inflammation requires an experienced surgeon.
